

SignPro Wizard

LQ-WIZARD

The LQ-Wizard forms part of the LQ-Framework toolkit. It is a software component that can be used to get the maximum benefit from 'inking' signature pads, i.e. those that have a built in LCD display, such as the Wacom STU-500.

Conventionally inking signature pads are used to collect handwritten signatures. In addition it allows information to be presented on the screen, and provides buttons, tick-boxes and check-boxes which can be customised and operated by the user.

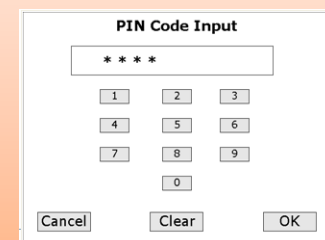

FEATURES

- ◆ The LQ-Wizard is an ActiveX component which is installed on machines with a suitable inking signature pad connected.
- ◆ The signature pad display is controlled using java script. The script may be part of a local application, or may be generated on a server and downloaded to the client machine. In a typical server application the script will be tailored to the transaction in hand and may differ for every user.
- ◆ In a typical application the pad will be used to present a sequence of pages. These can be used to guide a user through the various stages of a transaction, including the signing of a document.
- ◆ Push-buttons, check-boxes and radio-buttons may be displayed on the pad, and operated by tapping them with the pen. This input is then processed by the java script to control the process flow. It can also be used to add mark-up to the document being displayed in the browser, such as check-boxes indicating customer preferences.
- ◆ When used with the LQ-Framework to sign documents the Wizard can be used to guide the customer to a particular section of a multi-page document and zoom in on a particular paragraph, thereby ensuring that they have seen important contractual clauses.
- ◆ Signatures can be collected from the customer using the Wizard. The signature data stored has the same forensic and biometric strength as the rest of the LQ-Framework.

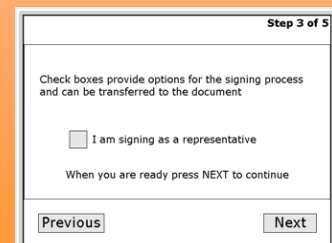

The LQ-Wizard can be used to collect handwritten signatures in the normal way:

The same device can also be used to collect PIN numbers:

Or simply to allow the user to choose options:

SignPro Wizard

IMPLEMENTATION

The implementation of a Wizard application requires a minimum of java script capability. It is supplied with detailed documentation and examples. The toolkit is supplied with pre-purchased support which has been found to be adequate for most developers to complete the full implementation

If required, Florentis can provide assistance with custom development services.

SYSTEM REQUIREMENTS

Operating System

The LQ-Wizard will work on the following versions of Microsoft Windows:
XP SP2
Vista.

Browser

Internet Explorer versions 6-8
Firefox version 3

Signature Pads

Wacom STU-500
Interline ePad-Ink

Florentis are official suppliers in the UK for the Wacom signature pads.

Florentis Ltd.,
Vallis House,
57 Vallis Road,
Frome,
